

Amendments to the Claims:

Listing of Claims:

1.-12. (canceled)

13. (currently amended). A tote for carrying and transporting bottles, comprising:
a front panel defining a right side, a left side, a bottom, and a top terminal edge;
a rear panel defining a right side, a left side, a bottom, and a terminal edge, the
rear panel being secured to the front panel by one of stitching, adhering, welding and
stapling along at least the right side, the left side and the bottom terminal edges, the front
and rear panels defining a pocket there between, the top terminal edges of said front and
rear panels being arcuate, said top terminal edges defining a tote opening communicating
with the tote pocket, at least one of the front and rear panels including an aperture formed
therein, the front and rear panels having a thickness of between about 3 mm to about 5
mm and being fabricated of neoprene, the neoprene being sandwiched between layers of
stretch nylon; the tote having a substantially flattened condition when no bottle is
disposed in the pocket with bottom terminal edges of the front and rear panels being
arcuate when the tote is in said flattened condition, insertion of a bottle at least partially
into the tote opening flattening the arcuate bottom terminal edges, the front panel and the
rear panel being secured to one another along a contact line positioned between the right
side terminal edges and the left side terminal edges and dividing the pocket into a first
pocket and a second pocket, bottom terminal edges of each of the front and rear panels
being scalloped, wherein a first lobe of the bottom terminal edge is operatively associated
with the first pocket, and a second lobe of the bottom terminal edge is operatively
associated with the second pocket, the tote according to claim 12, further comprising:
a third panel defining a right side, a left side, a bottom, and a top terminal edge; wherein
the right side terminal edge of the front panel is secured to the left side terminal edge of
the rear panel, and a portion of the bottom terminal edge of the front panel is secured to
the bottom terminal edge of the rear panel; wherein the right side terminal edge of the
rear panel is secured to the left side terminal edge of the third panels, and a portion of the

bottom terminal edge of the rear panel is secured to a portion of the bottom terminal edge of the third panel; and wherein the right side terminal edge of the third panel is secured to the left side terminal edge of the front panel, and a portion of the bottom terminal edge of the third panel is secured to a portion of the bottom terminal edge of the front panel.

14 (original). The tote according to claim 13, wherein the front, rear and third panels are secured to one another along a contact line substantially centrally located between the right and left side terminal edges of each of the front, the rear and the third panels.

15.-16 (canceled).

17.-18. (canceled)

19 (currently amended). A tote for carrying and transporting a bottle or bottles, the tote comprising:

a front panel defining a perimetral edge, the front panel; and
a rear panel defining a perimetral edge, the front panel being secured to the rear panel along at least a portion of the perimetral edge so as to define a pocket there between and an opening into the pocket, wherein the front and rear panels are fabricated from a neoprene laminated between two layers of stretch nylon, The tote according to
claim 18 wherein the front and rear panels are secured to one another along a contact line extending in a direction orthogonal to the opening, wherein the contact line divides the pocket into a first and a second pocket, wherein the terminal edge opposite the opening is scalloped such that each of the first and second pockets is in operative association with a lobe of the scalloped terminal edge.

20. (canceled)
